The Markup Assist feature automatically creates any markup you would like to reference in your design. For example, you could reference the exact page number, layout, or list item of a marketing flyer or a sheet of inventory data, and use Markup Assist to make it available in your design. Use Express Tools and Chalk, to speed up your edits with a familiar workflow. Express Tools comes in four flavors: Lightning, Sketch, Eraser, and Line. And Chalk provides a safe and effective way to collaborate, build on previous work, and correct for design errors, so you can effectively communicate with your collaborators. Catch up with powerful revising and annotation features. Revising auto-corrects changes automatically, and you can safely undo edits that won't be seen in other people's views. You can also annotate parts of your design with your team and work together on improving the entire design. Drafting software that embraces collaboration: Share designs by seamlessly sending them as files and inviting others to participate. Draw as you work with others, with no matter how many collaborators you have. AutoCAD is designed for easy collaboration. Design for larger footprints: Use the Extents command to build a new page, with a resolution that is easy to read and that makes room for your latest insights. Fix floating views: Select the floating view as you would any other object to set its origin or move it to an easier-to-read location. Work with large drawings: Improve on your drawings with a variety of resizing options. Use the Unsnap command to quickly remove boundaries or blocks. You can also resize lines with the Lines tool. And get as close as you want to your drawings with the Zoom Extents command. Make efficient design layouts: Make your layouts smarter with the ability to create several lines for a particular design element, such as the Title block for a layout or a title block for each illustration. Leverage the power of AutoCAD with SketchFlow: SketchFlow is an innovative user experience (UX) feature that uses a direct connection to Sketchup. By simply dragging and dropping any Sketchup model into AutoCAD, you can directly place it inside AutoCAD. It enables you to be more efficient with your drawing time, because you can design and place in one application
