Q: boost::optional, boost::in_place_init_of and destructor with deleter I need a portable container to store some objects with a "fuzzy" ownership. E.g. I may store a class, but only really be able to free it, when its destructor is called, as it may be the only object that knows about it. Here is my tentative implementation:

```
#include <string>
#include <memory>
class Foo { public: Foo() : data(0) {}
void foo() { m_data = "blah"; } void
bar(boost::in_place_init_t) { m_data = "blah2"; } private:
std::string m_data; }; class FooDeleter { public: void
operator()(Foo*) const { delete this->m_data; } private:
std::string* m_data; }; class FooContainer { public:
typedef boost::optional Foo; typedef
std::shared_ptr Foo; typedef boost::in_place_init_t
init_f; void init(init_f, optional_f = optional()) { m_optional
= optional(Foo()); } private: std::shared_ptr m_
```

Android Police There's little reason to add a recap of what's gone before, but we'll do it for you anyway...

We've recommended this game to you before, and for good reason: It's a fantasy RPG that happens to be played online with a bunch of other players, and it's currently free. A few of you were actually interested, but most of you used the gateway drug of "sure, let's download the free version and find out if it's any good." And it is. Trust us. What kind of game is it, you ask? Well, it's the type of game that the original Crisis brought to us gamers, and it's that very same balance of fantastic graphics and grounded gameplay that sets it apart from countless other online fantasy RPG's. You get to take down a boss with a speed of light cast of, say, an Ice Barrier or Shell Barrier spell, and then engage in fast-paced close-range combat while pulling out the big hits. Fun! You'll be battling dozens of other players all across the world, and many of them will have dedicated squads of four and five, so team-up and let loose with all the awesome spells you know. Hell, you can even play with the AI just to see what kind of combos you can form in chaos. The AI is infinitely more capable than what the old Phantasy Star Online had to offer, so it's not as much of a cakewalk as it used to be. And like the original, the game is all-character based, meaning you'll be customizing a ton of different stats and aspects of your character from five different racial types. You'll have a few choices as to gender, class, profession, and so on. Not to mention the completely customizable appearance of your character, which we'll get into a bit below. It's quite possible to have a custom build

from start to finish within a matter of hours, though it requires a bit of an understanding of the game's systems, so we've included a help page that should keep you covered. Your character's level is determined by which race you use, though it's pretty easy to understand. You start low, and you hit milestones (these can be overtuned by the game) as you complete certain tasks. So while it might take a bit of time to level up to a certain point, it's not a grueling experience (though some tasks become pretty hard to deal with at bff6bb2d33
